

ENERGISER

26%Carbohydrate; 2%N; 4%P₂O₅; 4%K₂O;

2%Humic Acid;

0.5%Trace Elements (Mn, Cu, Co, Ca, Fe, Zn, Mg)

Carbohydrate Bio-Activator

Energiser is a rich source of carbohydrates (derived from sugar) which provides the soil and plant with a rich source of nutrients and energy. It also contains humic acid, significant amounts of N, P, K and a full range of trace elements. In the soil the micro-organisms flourish on this food source and in turn provide plant available nutrients for turf root uptake.

BENEFITS OF ENERGISER

Stimulates soil nutrient uptake

Improves photosynthesis in low light conditions

Improves pathogen resistance

Promotes healthy growth

Improves drought and cold stress resistance

Helps accelerate thatch breakdown

Can reduce fertiliser input

APPLICATION

50Litre/Hectare (2L/500sq.mtrs) in 400L/Ha water March onwards when soil temperature is +10 degrees C. Repeat every for weeks @ 25Litres/Hectare.
