

Kick-Off is a unique combination of nutrients designed for application to seed in order to promote a strong root system and initiate healthy growth in arable crops. Kick-Off contains the highly plant mobile form of phosphorus known as phosphite. Phosphorus is a vital element for early rooting and is relatively immobile in the soil and often difficult for roots to access. Kick-Off also contains essential elements Manganese and Zinc formulated for maximum availability to the crop during germination.

Application Rates & Timings

| | |
|--------------------------|---|
| Cereals | Apply @ 2.5 litres per tonne of seed |
| Oilseed Rape | Apply @ 3.5 litres per |
| Pulses/Peas/Beans | Apply @ 4.0 litres per tonne of seed |
| Herbage Seed | Apply @ 4.0 - 10.0 litres per tonne of seed |

Typical Analysis

| | | |
|---|----------------|------------|
| Compound fluid fertiliser 1.5 -13.5 -3.0 | | |
| | % w/w | g/l |
| Total Nitrogen (N) | 1.5% | 20 g/l |
| Phosphorus Pentoxide (P ₂ O ₅) | 13.5% (5.9% P) | 180 g/l |
| Potassium Oxide (K ₂ O) | 3.0% (2.5% K) | 40 g/l |
| Sulphur (SO ₃) | 10.0% | 135 g/l |
| Manganese (Mn) | 6.0% | 80 g/l |
| Zinc (Zn) | 1.2% | 16 g/l |

Mixing Instructions

Kick-Off is a true solution which can be applied either directly to the seed or as a pre-mix with water. Kick-Off can be applied through existing seed treatment equipment. Equipment should be cleaned thoroughly and rinsed with clean water once treatment is complete.
